

Sirius Compass

Guiding every child. Empowering every carer.

The AI-powered behaviour support platform for autism and complex care

A NEW STANDARD IN CARE

What is Sirius Compass?

Sirius Compass is a complete, AI-powered behaviour support platform built for children and young people with autism and complex needs — and for the staff, families and educators who support them. It brings every record, plan, incident and insight into one calm, secure place, so the focus stays where it belongs: on the child.

Instead of scattered paperwork, guesswork and after-the-fact reports, Sirius Compass gives your whole team a shared, living picture of each young person — what helps them, what unsettles them, and how they are progressing — updated in real time and backed by evidence regulators trust.

Everything in one place

Person-centred records

A rich profile for every young person: diagnosis, communication and sensory needs, medicines, allergies, likes and dislikes, emergency contacts and key workers — the whole child, not just a file.

Behaviour support plans (PBS)

Best-practice Positive Behaviour Support plans: functional assessment, proactive, active and reactive strategies, replacement skills and SMART targets — with every version preserved.

Real-time wellbeing monitoring

Wearable-ready heart-rate and stress tracking translated into simple green–amber–red zones, so staff can see distress building before a crisis happens.

Living care plans

Versioned care plans with structured risk assessment and crisis protocols. Draft, review and approve with full accountability — only managers and clinicians can bring a plan live.

Incident recording done right

Fast, structured ABC logging (antecedent, behaviour, consequence) with severity, injuries, interventions, debriefs and lessons learned — even by voice.

Outcomes that prove progress

Measurable goals in every domain of a young person's life, tracked over time — clear, celebratory evidence that support is working.

“Sirius Compass turns everyday care into evidence, and evidence into better days for every child.”

INTELLIGENCE THAT CARES

AI support & powerful analytics

Sirius Compass doesn't just store information — it understands it. Built-in AI works alongside your team like a tireless specialist colleague, spotting patterns humans miss and offering calm, practical guidance in the moment it's needed.

Your AI co-pilot

AI Coach — in the moment

Instant, low-arousal de-escalation guidance grounded in respected practice. When a situation is escalating, staff get calm, practical steps in seconds.

Pattern & function analysis

The AI reviews incidents across weeks and months to reveal triggers, setting events and what a behaviour is really communicating — insight that transforms support plans.

Social stories on demand

Personalised social stories generated in moments, helping a young person prepare for new places, people and changes with confidence.

Voice-to-incident

Staff simply say what happened and the AI turns it into a structured, professional ABC record — no more late-night paperwork or lost detail.

AI-drafted plan revisions

When the data shows a strategy isn't working, the AI drafts an evidence-cited revision to the behaviour support plan for a clinician to review and approve. Humans always decide.

Early-warning biometrics

Live arousal zones from wearable data mean staff can step in with support before distress becomes crisis — proactive care, not reactive management.

What the analytics tell you

- ◆ **Which strategies actually work** — BSP effectiveness reporting shows whether incidents fall after a plan changes.
- ◆ **When and why behaviours happen** — time-of-day, environment and antecedent patterns across every logged incident.
- ◆ **Whether restrictive practices are reducing** — every use logged, justified, authorised and trended downwards over time.
- ◆ **How each child is progressing** — outcome tracking across communication, independence, wellbeing and more.
- ◆ **Organisation health at a glance** — live dashboards of activity, alerts, incident severity and team compliance.
- ◆ **Regulator-ready evidence** — reports structured for CQC (England), Care Inspectorate (Scotland) and MoCD (UAE).

BUILT FOR EVERYONE AROUND THE CHILD

The benefits, for every person

For the children — most importantly

- ◆ **Understood, not managed.** Pattern analysis reveals what behaviour is communicating, so support meets the need behind it.
- ◆ **Fewer crises, calmer days.** Early-warning biometrics and in-the-moment coaching help adults step in gently, early.
- ◆ **Less restrictive care.** Rigorous tracking drives restrictive practices down — dignity is measured and protected.
- ◆ **Consistency everywhere.** Every adult follows the same up-to-date plan, so the child gets the same understanding at home, in school and in care.
- ◆ **Real progress, celebrated.** Outcome tracking turns small wins into visible momentum toward a fuller, more independent life.

For care & education staff

- ◆ **Hours back every week.** Voice-to-text incident logging and AI-drafted plans slash paperwork dramatically.
- ◆ **Confidence in hard moments.** The AI Coach puts specialist de-escalation guidance in every staff member's pocket.
- ◆ **One shared picture.** Teachers, support workers and clinicians see the same live plans and strategies — no more mixed messages between classroom and home.
- ◆ **Grow your skills.** A built-in training academy with courses, quizzes, certificates and badges keeps the whole team confident and compliant.
- ◆ **Protected professionally.** Complete audit trails and structured debriefs mean staff decisions are always evidenced.

For parents & families

- ◆ **A window into their child's day.** The family portal shows plans, progress and updates for their own child — securely and simply.
- ◆ **Peace of mind.** Knowing distress is spotted early and every incident handled with structure and care.
- ◆ **A real voice.** Families see the same person-centred plan the professionals use, and can contribute what only a parent knows.

For managers & leaders

- ◆ **Inspection-ready, always.** Evidence packs assembled automatically in the exact structure regulators expect.
- ◆ **Serious incidents never slip through.** Severity-3+ events automatically flag care plans for review and alert managers.
- ◆ **Total governance.** Role-based access, organisation-level data walls, audit logs and approval controls built in from day one.

SECURE. COMPLIANT. READY.

Trust built in from day one

Fortress-grade privacy

Every organisation's data is completely isolated. Role-based access ensures parents, staff, clinicians and admins each see exactly what they should — nothing more.

Multi-framework compliance

Purpose-built reporting for CQC (England), the Care Inspectorate (Scotland) and MoCD (UAE) — expand across borders without changing systems.

A complete audit trail

Every action — who, what, when — is recorded automatically. Accountability isn't an afterthought; it's the foundation.

Inclusive by design

Full English and Arabic support, a calm mode for reduced sensory load, and guided tours that make every user feel at home.

Why Sirius Compass?

Because every child deserves adults who truly understand them — and every adult deserves tools that make that possible. Sirius Compass replaces guesswork with insight, paperwork with presence, and crisis management with genuine, proactive care. It is the difference between recording a child's hardest moments and preventing them.

From the first record to the regulator's report, from the classroom to the family living room, Sirius Compass keeps everyone pointed in the same direction: toward calmer days, stronger progress and brighter futures for the children at the heart of it all.

"Predict. Support. Evidence. Thrive."

Sirius Compass — Guiding every child. Empowering every carer.
